

## GENERAL

These actuators enable modulating control in conjunction with controls providing an analog output. The direction of movement is reversible by means of an internal selector plug.

They operate Honeywell's standard valves in heating, ventilation, and air conditioning (HVAC) applications.

## FEATURES

- Quick and easy installation
- No separate linkage required
- No adjustments
- Force-limiting end switches
- Manual operator
- Synchronous motor
- Corrosion-resistant design
- Selectable 0... 10 Vdc or $2 . . .10 \mathrm{Vdc} /$ 0 ... 20 mA or 4 ... 20 mA input signal
- Position feedback signal
- Direct or reverse-acting adjustable
- Selectable stroke position on signal failure
- Maintenance-free

## SPECIFICATIONS

Temperature Limits
Ambient operating limits
Ambient storage limits
Medium valve temperature
.. $.50^{\circ} \mathrm{C}$ at $5 . . .95 \%$ rh
$-40 \ldots+70^{\circ} \mathrm{C}$ at $5 \ldots 95 \%$ rh
Max. $+150^{\circ} \mathrm{C}\left(220^{\circ} \mathrm{C}\right.$ with
High-Temperature Kit)

| nominal stem force | 1800 N |  |  |

## OPERATION

## General

The drive of a synchronous motor is converted into linear motion of the actuator stem by using a worm gear transmission.
The actuator stem is connected with the valve stem by a button keyed retainer connection.
The force sensor switches off the motor precisely when the nominal stem force is reached.
If used as a replacement of an already-installed actuator M7421A,B, the following issue is to be observed:

- Permanent power supply (see section "Electrical Installation")

## Manual Operation

The actuators are equipped with a manual operator used in case of power failure. Manual operation is possible only after the power supply has been switched off or disconnected. To operate, push the manual operator knob down and turn clockwise to move the stem upward and counter-clockwise to move the stem downward. If the actuator returns to automatic control, the manual operator knob unlocks automatically.
NOTE: Manual operation allows a very high closing force capable of jamming the actuator spindle and exceeding the rating of the force switches, so that the motor cannot move.
Therefore, after a manually close-off operation, it may be necessary to release the spindle one turn by turning the manual operator knob, so that the manual operator will automatically disengage on power resumption.

## Electrical Installation

$24 \mathrm{~V} \sim$ and $24 \mathrm{~V} \perp$ (see Fig. 3.) must be applied under all operating conditions.
Cable length/diameter for field mounting:

- Max. $200 \mathrm{~m} / 1.5 \mathrm{~mm}^{2}$

## Input Signal

The Vdc- or mA-input signal is selected by shifting jumper plug W4 (see Fig. 2). The factory setting of W4 is "Vdc". No external resistor for mA-input signal is necessary.

## Input Signal Range

The range of the analog input signal Y ( $0 \ldots 10 \mathrm{Vdc} / 0 \ldots 20 \mathrm{~mA}$ or $2 \ldots 10 \mathrm{Vdc} / 4 \ldots 20 \mathrm{~mA}$ ) can be selected by changing the position of jumper plug W2 (Fig. 1.). The factory set is at $0 . . .10 \mathrm{Vdc}$.

## Direction of Action

The direction of action (direct or reverse) can be selected by changing the position of jumper plug W3 (Fig. 1.). The factory set is: stem extends at increasing signal (direct acting).
NOTE: Jumper plugs $\mathrm{W} 1, \mathrm{~W} 2, \mathrm{~W} 3$, and W 4 are accessible after the cover has been removed. They are located on top side of the printed circuit board (see Fig. 2).

Fig. 1. Location of jumper plugs W1, W2, W3, W4

Fig. 2. Effects of jumper plugs W1, W2, W3, W4

## Output Signal "POSITION"

An analog output signal $2 . . .10 \mathrm{Vdc}$ "POSITION" representing the actuator stroke 0... $100 \%$ can be selected. It can be used for remote indication.
When the actuator stem is fully extended, the output signal is 10 Vdc .

## Y-Signal Override

To override the $Y$-signal, inputs 1 and 2 (see Fig. 3.) must be connected as follows:

- stem extended: $24 \mathrm{~V} \perp$ at input 1 ; input 2 not connected
- stem retracted: $24 \mathrm{~V} \perp$ at input 2; input 1 not connected 24 Vac power and ground must be permanently connected.

## Accessories

The following accessories are available upon request.

## Auxiliary Switches

The actuators can be equipped on-site with an auxiliary switch unit with two switches. Their switching points are adjustable over the full length of the actuator stroke.

The switches can be used e.g. to switch pumps or to provide remote indication of any stroke position.
A cable gland $\mathrm{M} 20 \times 1.5$ is delivered with the unit.

| type | for <br> stroke | order no. |
| :---: | :---: | :---: |
| auxiliary switches; 24 Vac / 5 (3) A <br> (package contains 2 SPDT <br> switches) | 20 mm | $43191680-002$ |
| 38 mm |  |  |

High-Temperature Kit
Two options for applications with a medium valve temperature of $+150 \ldots+220^{\circ} \mathrm{C}$ are available for the following valves:

| order number <br> High-Temp. Kit | valve | DN |
| :---: | :---: | :---: |
| $43196000-001$ | V5011R/V5011S | $15-50$ |
|  | V5013R/V5013E | $15-50$ |
|  | V5328A/V5329A | $15-32$ |
| $43196000-002$ | V5328A/V5329A | $40-80$ |
|  | V5049A | $15-65$ |
|  | V5016/V5025/V5050A | $15-80$ |
|  | V5328A | $100-150$ |
|  | V5016A | $100-150$ |
| $43196000-038$ | V55025A | $100-150$ |
|  | V5049A (PN25/40) | $80-100$ |
|  | V5050 (PN16) | $100-150$ |
|  | V5050 (PN25/40) | 100 |

## Input Signal Failure

In case of a failure of the signal input (Y) caused, e.g., by a broken wire, the actuator will run to one of the three positions (possible only if W4 has been set to the "V" position):

- $0 \%$ : actuator stem position for $0(2) \mathrm{Vdc}$
- $50 \%$ : actuator stem in central position
- $100 \%$ : actuator stem position for 10 Vdc

The factory setting of W1 is "50\%".

## CLOSE-OFF PRESSURE RATINGS

| Stroke |  | 20 mm |  |  |  |  |  |  |  | 38 mm |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
